IT Operations Report — Q3 2026

Service availability	Major incidents (P1 / P2)	Median ticket resolution	Change success rate
99.94%	**3 / 11**	**5.2 h**	**97.6%**
target 99.90%	Q2: 5 / 14	Q2: 6.8 h	412 changes

1. Summary

All core services met their availability targets this quarter. The service desk resolved tickets faster than in any quarter since 2024.

Three major incidents affected tenants directly. Two of the three were caused by configuration that drifted from its documented state.

2. Major incidents

Date	Service	Impact	Duration	Root cause
9 Jul	Tenant portal	Logins failed for all tenants	1 h 12 min	Expired TLS certificate on the identity proxy; renewal job had been disabled during a migration.
22 Aug	Repairs line (telephony)	Calls dropped after 30 seconds	47 min	Carrier routing change, reverted by the carrier.
14 Sep	Rent payments	Card payments delayed, no data lost	2 h 05 min	Database failover stalled on a full transaction log.

Each incident has a completed review, and all eleven follow-up actions are tracked in the problem register.

3. Monitoring changes

Alerts now page the on-call engineer only when a user-facing service degrades. The new latency rule for the tenant portal is shown below.

```
groups:
  - name: tenant-portal
    rules:
      - alert: PortalHighLatency
        expr: histogram_quantile(0.95, sum by (le) (rate(portal_request_seconds_bucket[5m]))) > 1.5
        for: 10m
        labels:
          severity: page
        annotations:
          summary: "Portal p95 latency above 1.5 s for 10 minutes"
```

4. Projects

- Laptop refresh for housing officers
  - 186 of 240 devices replaced
  - Remaining devices scheduled for October:
    - North and East area teams
    - Contact centre supervisors
- Move of the repairs system to the new data centre
  - Rehearsal completed on 28 September
  - Cut-over planned for 8 November
- Retirement of the legacy document store (delayed to Q1 2027)

5. Storage capacity

At the current growth rate the object store will need expansion within eighteen months.

Storage cluster	Used (TB)	Free (TB)	Growth per month
Primary SAN	182.4	57.6	2.1%
Backup vault	411.0	189.0	3.4%
Object store	64.8	135.2	5.9%

Prepared by the Infrastructure and Service Desk teams, 6 October 2026.
