Dr H. Adeyemi
Consultant Cardiologist
Riverside General Hospital
Hospital Road, Riverside RS1 4AB

Dear Dr Adeyemi,

Referral for cardiology assessment: Mr Jonas Becker, born 3 July 1961

Reason for referral

Thank you for seeing Mr Becker, a retired bus driver aged 65, who has had episodes of exertional chest tightness for the past eight weeks. I would be grateful for your assessment of a possible angina and for advice on further investigations.

The episodes come on after about ten minutes of brisk walking and settle within five minutes of rest. He has had no episodes at rest and no syncope, and there is no history of palpitations.

Relevant history

- Hypertension, diagnosed in 2018 and well controlled on treatment.
- Type 2 diabetes, diet controlled since 2021.
- Ex-smoker; stopped in 2015 after thirty pack years.
- Father had a myocardial infarction at the age of 58.

Current medication

Medicine	Dose	Frequency	Since
Ramipril	5 mg	Once daily	2018
Amlodipine	5 mg	Once daily	2019
Atorvastatin	20 mg	At night	2021
Aspirin	75 mg	Once daily	October 2026

Examination and results

Blood pressure	138/82 mmHg, seated, left arm
Pulse	72 per minute, regular
Heart sounds	Normal first and second sounds, no murmurs
Resting ECG	Sinus rhythm, no acute ST changes
Cholesterol	Total 4.6 mmol/l; LDL 2.4 mmol/l
HbA1c	46 mmol/mol

On examination there was no evidence of heart failure and the chest was clear. I have asked Mr Becker to avoid strenuous exertion until he has been seen and to use his glyceryl trinitrate spray if symptoms come on.

Please contact me if his symptoms become more frequent or start to occur at rest, and I will arrange an emergency admission.

Enclosures

- ☑ Resting ECG tracing
- ☑ Blood test results from 9 October 2026
- ☐ Echocardiogram report (not yet available)
- ☑ Summary of the patient record

Yours sincerely,

Dr Priya Raman
General Practitioner, Marlowe Medical Group
