Release Runbook: WMS 7.4 at Kestrel Point Distribution Centre

Operations Engineering · Version 3 · 22 October 2026

Change ID	CHG-26-0918
Maintenance window	Saturday 31 October 2026, 22:00 – 02:00 (local time)
Change owner	R. Haverkamp, Platform Team
Rollback decision point	00:30 at the latest
Affected services	wms-api, wms-picking, label-printer-gateway

1. Purpose

This runbook describes how to deploy release 7.4 of the warehouse management system to the production cluster at Kestrel Point. The release introduces wave picking for chilled goods and replaces the label printer gateway.

2. Pre-checks

- Confirm the change is approved in the change calendar
- Check the state of the cluster
  - All nodes report Ready
  - No pods in CrashLoopBackOff
  - Disk usage on database volumes below 70 %
- Notify the shift supervisor
  - Picking stops at 21:45
  - Trucks scheduled after 22:00 are loaded manually
- Take a database snapshot and record its identifier

3. Deployment

3.1 Update the release values

Set the image tags and the feature flag in the environment file before running the pipeline.

```
release: "7.4.0"
images:
  wms-api: registry.internal/wms/api:7.4.0
  wms-picking: registry.internal/wms/picking:7.4.0
  label-gateway: registry.internal/wms/label-gateway:2.0.3
features:
  chilled_wave_picking: true
  legacy_label_spooler: false
replicas:
  wms-api: 4
  wms-picking: 3
```

3.2 Run the deployment

1. Put the site into maintenance mode from the operations console.
2. Run the database migration job and wait for it to complete.
3. Deploy the services with the commands below.
4. Take the site out of maintenance mode.

```
kubectl config use-context kpdc-prod
kubectl -n wms apply -f release-7.4.0.yaml
kubectl -n wms rollout status deploy/wms-api --timeout=10m
kubectl -n wms rollout status deploy/wms-picking --timeout=10m
```

> If a rollout does not finish within ten minutes, stop and go to section 5.

4. Verification

Check	Where	Expected result	Owner
API health	GET /health on wms-api	HTTP 200 and version 7.4.0	Platform
Wave creation	Picking console, test site KP-TEST	Chilled wave created within 30 seconds	Operations
Label printing	Printer bank B, dock 4	Test label printed with new layout	Operations
Order backlog	Database query below	No orders stuck in status ALLOCATING	Platform

```
SELECT status, COUNT(*)
FROM outbound_order
WHERE updated_at > now() - interval '30 minutes'
GROUP BY status;
```

5. Rollback

Rollback restores release 7.3.2 and the database snapshot taken during the pre-checks. Orders created after the snapshot must be re-imported from the transport management system.
