Field Trial Summary: Drought-Tolerant Millet

This summary reports the second season of field trials at three experimental stations. Each plot was sown on the same day and received no irrigation after germination.

Results

Table 1. Average yield per hectare by variety

Variety	Yield (kg/ha)	Days to maturity
Sahel Gold	1,240	84
Tillaberi 3	1,105	79
Dune Runner	980	72
Riverbank Early	1,310	91

Sahel Gold and Riverbank Early produced the highest yields, but Riverbank Early needed almost three more weeks to mature. Dune Runner matured fastest and remains the safest choice where the rains end early.

Next Steps

A third season is planned before any variety is recommended to growers.
