Build Notes for the Ledger Service

PROJECT SETUP

The ledger service is built from a single repository. Install the toolchain before cloning the sources.

```
git clone https://example.org/ledger.git
cd ledger
make deps
make test VERBOSE=1
```

CONFIGURATION

The service reads its settings from a small file at start-up.

```
[server]
port = 8085
log_level = "info"

[storage]
path = "/var/lib/ledger"
    # keep the path absolute
```

RELEASE PROCESS

Releases are cut from the main branch every second Tuesday.

> *Never tag a release while the nightly build is red.*

The release manager signs the tag and publishes the notes.
